

DEBORAH PETER MONDAY

Lagos, Nigeria (Open to Remote , Open to Relocate , Open to On-Site)

+2348148278613 | peterdebby189@gmail.com | [Linkedln](#)

Your Next Junior Cybersecurity Analyst

Deborah Peter Monday is a Cybersecurity Analyst | SOC Analyst | Threat Detection & Incident Response with hands-on experience in security operations, threat detection, incident analysis, network security, vulnerability assessment, security monitoring, and penetration testing. Experience in analyzing security events, network traffic, suspicious activity, vulnerabilities and security configurations across Windows and Linux environments. Hands-on experience with Wazuh, Wireshark, Nmap, Burp Suite, Virustotal, phishtool, Active Directory, Powershell, Virtualbox, and VMware. Strong foundation in SIEM operations, incident response, network analysis, Active Directory security, phishing analysis, web application security, and security assessment, with a practical approach to identifying security risks, documenting findings, and recommendation remediation.

TECHNICAL SKILLS

- Cybersecurity Skills:** Security Operations: Security Monitoring, Security Alert Analysis, Incident Analysis, Incident Response, Threat Detection, Log Analysis, Vulnerability Assessment, Security Investigation., SIEM Monitoring: Wazuh, Security Event Analysis, Log Monitoring, Alert Investigation., Network Security: TCP/IP, DHCP, HTTP/HTTPS, OSI Model, Network Traffic Analysis, Network Scanning, Service Enumeration., Security Tools: Wireshark, Nmap, Burp Suite, VirusTotal, Metasploit, Phishtool, System & Infrastructure: Linux, Windows, Active Directory, Powershell, Metasploitable, Virtualbox, VMware, CISCO Packet Tracer, Cybersucrity Domains: SOC Operation, Threat Analysis, incident Response, Phishing Analysis, Web Application Security, Active Directory, Penetration Testing, Vulnerability Assessment., Professional Tool: Microsoft Word, Excel, PowerPoint, GitHub, security operations., Security Operations, Security Operations Center

EDUCATION

BSC | Cross River State University of Technology

Apr 2016 – 2019

Cybersecurity Training

Present

Tryhackme – Presecurity Learning Path (completed)

ElevateU Tech Cybersecurity Training

Completed hands-on cybersecurity training covering networking fundamentals, Linux and windows administration, SOC Operation, SIEM monitoring, incident response, threat detection, vulnerability assessment, Active directory security, penetration testing and security tools, including Wazuh, Wireshark, Nmap, Burp suite and Metasploit

PROJECTS

Active Directory Penetration Testing And Security Assessment, ElevateU Tech, [Link](#), LAGOS, Nigeria May 2026 – May 2026

- Conducted an authorized security assessment of a Windows Active Directory environment, performing reconnaissance and enumeration to identify domain users, services, and potential attack paths. Used tools including Nmap, Kerbrute, NetExec, to assess the environment and identify security weaknesses. Performed controlled password-spraying tests, analyzed discovered vulnerabilities and authentication risks, and documented findings with recommendations for improving Active Directory security, password policies, account protection, and network controls.

Full Incident Response Simulation, [Link](#), LAGOS, Nigeria

May 2026 – May 2026

- Conducted a controlled incident-response simulation involving a Windows Server environment and investigated simulated security events from detection through resolution. Performed security monitoring, alert triage, log analysis, incident investigation, threat identification, containment, and remediation. Analyzed suspicious activity and relevant system events, investigated indicators of compromise, assessed the potential impact, documented findings, and developed recommendations to strengthen security controls and prevent recurrence. Demonstrated a structured SOC incident-response workflow from detection to recovery and reporting.

Phishing Email Analysis Project, [Link](#), LAGOS, Nigeria

Jun 2026 – Jun 2026

- Analyzed simulated phishing emails to identify common indicators of phishing and social engineering attacks. Examined sender information, email headers, URLs, attachments, suspicious language, and social-engineering techniques to determine potential malicious intent. Investigated indicators of compromise and assessed the potential risk to users and systems. Documented findings and recommended appropriate email security controls, user awareness measures, and incident-response actions to reduce the risk of phishing attacks.

Web Application Testing, [Link](#), LAGOS, Nigeria

Jun 2026 – Jun 2026

- Completed hands-on web application security labs using the PortSwigger Web Security Academy, investigating common web vulnerabilities in controlled environments. Performed reconnaissance and analyzed application behavior by intercepting and modifying HTTP requests with Burp Suite. Practiced identifying and exploiting vulnerabilities including authentication vulnerabilities, access-control issues, and other common web security weaknesses.

Followed a structured testing methodology of reconnaissance, vulnerability identification, exploitation, impact assessment, and remediation. Documented findings and studied appropriate defensive measures, including secure input handling, parameterized queries, proper authentication and authorization controls, secure session management.

Wireshark Network Traffic Analysis, [Link](#), LAGOS, Nigeria

Jun 2026 – Jun 2026

- Conducted a hands-on network traffic analysis exercise using Wireshark by generating and capturing web traffic while accessing OpenAI, BBC, and Amazon. Analyzed the resulting packet captures to understand how different websites communicate across a network and how various protocols are used during web sessions.

Investigated DNS queries, TCP connections, TLS/HTTPS traffic, and QUIC traffic, examining source and destination IP addresses, ports, packet flows, and protocol behavior. Applied Wireshark display filters to isolate relevant traffic and followed network conversations to understand the communication process between the local system and external web servers.

Setup and Configuration of a three LAN Network using Single Router, ElevateU Tech, [Link](#), Nigeria Jul 2026 – Jul 2026

- Designed and configured a multi-LAN network topology in Cisco Packet Tracer consisting of three separate LANs interconnected through a router. Configured end devices, switches, and router interfaces to establish communication between the different network segments.

Implemented IP addressing and subnetting for each LAN and configured router interfaces with appropriate gateway addresses to enable inter-network communication. Configured DHCP to automatically assign IP addresses and network parameters to connected devices and verified connectivity using tools such as ping and network configuration commands.

Tested communication between devices across all three LANs, identified and resolved connectivity and configuration issues, and validated proper routing between the network segments. This project strengthened practical skills in network design, IPv4 addressing, subnetting, DHCP, routing, LAN segmentation, Cisco IOS configuration, and network troubleshooting.
