PROFESSIONAL SUMMARY

Cybersecurity Analyst with hands-on experience in security operations, threat detection, incident analysis, network security, vulnerability assessment, security monitoring, and penetration testing. Experience in analyzing security events, network traffic, suspicious activity, vulnerabilities and security configurations across Windows and Linux environments. Hands-on experience with Wazuh, Wireshark, Nmap, Burp Suite, Virustotal, phishtool, Active Directory, Powershell, Virtualbox, and VMware. Strong foundation in SIEM operations, incident response, network analysis, Active Directory security, phishing analysis, web application security, and security assessment, with a practical approach to identifying security risks, documenting findings, and recommendation remediation.

CYBERSECURITY PROJECTS & HANDS-ON EXPERIENCE

FULL INCIDENT RESPONSE SIMULATION

- Designed and executed a controlled incident-response exercise involving a Windows Server environment and security monitoring with Wazuh.
- Configured Wazuh to collect and monitor security-relevant events and investigated generated alerts during simulated security activity.
- Performed reconnaissance and security testing using Nmap and other security tools within the authorized lab environment.
- Analyzed system and network activity using Wazuh and Wireshark to identify indicators of suspicious behavior.
- Investigated security events, correlated relevant evidence, and assessed the potential impact of observed activity.
- Documented investigation findings and developed recommendations for containment, remediation, and improved security monitoring.

Active Directory Security Assessment

- Conducted an Active Directory security assessment within a controlled lab environment.
- Enumerated users, groups, organizational units, permissions, and domain configurations.
- Assessed authentication, privilege management, and security configuration weaknesses.
- Performed security testing and analysis to identify potential attack paths and security risks.

- Documented findings and applied Active Directory security and administration best practices.

Phishing Email Analysis

- Investigated suspicious emails using phishing analysis techniques and VirusTotal.
- Analyzing email headers, URLs, attachments, and other indicators to assess sender authenticity and identify potential malicious activity.
- Analyzed phishing indicators and potential attack characteristics.
- Documented findings and developed recommendations for improving email security and user awareness.

Web Application Security Assessment

- Assessed a vulnerable web application for authentication, authorization, and application-security weaknesses.
- Used Burp Suite to intercept, inspect, and analyze web application requests and responses.
- Tested application behavior and security parameters to identify potential vulnerabilities.
- Documented security findings and provided practical remediation recommendations.

Network Scanning & Vulnerabilities Analysis

- Conducted host discovery and service enumeration using Nmap in controlled environments.
- Analyzed discovered ports, services, and network information to identify potential security exposure.
- Applied reconnaissance and enumeration techniques during security assessments.
- Documented scan results and security observations for further investigation.

Three-LAN Network Infrastructure Project

- Designed and configured a three-LAN network using Cisco Packet Tracer.
- Implemented routing and connectivity between multiple network segments.
- Applied IP addressing, routing, switching, and network communication principles.
- Tested connectivity and analyzed network behavior across LAN segments.

Technical Skills

- **Security Operations:** Security Monitoring, Security Alert Analysis, Incident Analysis, Incident Response, Threat Detection, Log Analysis, Vulnerability Assessment, Security Investigation.
- **SIEM Monitoring:** Wazuh, Security Event Analysis, Log Monitoring, Alert Investigation.
- **Network Security:** TCP/IP, DHCP, HTTP/HTTPS, OSI Model, Network Traffic Analysis, Network Scanning, Service Enumeration.
- **Security Tools:** Wireshark, Nmap, Burp Suite, VirusTotal, Metasploit, Phishtool
- **System & infrastructure:** Linux, Windows, Active Directory, Powershell, Metasploitable, Virtualbox, VMware, CISCO Packet Tracer
- **Cybersucrity Domains:** SOC Operation, Threat Analysis, incident Response, Phishing Analysis, Web Application Security, Active Directory, Penetration Testing, Vulnerability Assessment.
- **Professional Tool:** Microsoft Word, Excel, PowerPoint, GitHub

CYBERSECURITY TRAINING

ElevateU Cybersecurity Bootcamp | April 2026 – June 2026

Hand-on training in Network, Linux, & Windows

Administration, SOC Operations, Active Directory, Wireshark

Incidents Response, Threat Detection, and Penetration Testing

Tryhackme – Presecurity Learning Path (completed)

EDUCATION

Bachelor of Hospitality & Tourism Management

2016-2019
